

In-class / Homework

As we've seen today, there are multiple ways to represent the same information. And the more complex it is, the more you must work to keep its presentation clear and meaningful. Your assignment is to create a visualization of your classes this semester. You must include:

- Class name
- Instructor
- Location
-

You can also include variables such as:

- *Students*
- *Time*
- *Level of interest*
-

You can choose any type of visualization you choose. Think about the examples we've seen today, then use your own judgment to create a method that works for your unique communication challenge.

The visualization is due at the start of class next week: 3/25/2003.
