

In-class / Homework

In-class activity

Now it's your turn to perform a "speed" usability test. You have the rest of the class to complete the following:

- 10 minutes: Prepare prototype for testing.
- 15 minutes: Develop a test plan using example distributed in class.
- 15 minutes: Test prototype with participant.
- 10 minutes: Prepare presentation for class. Review only highlights for each page.

Homework

This was only practice. You must perform the same activities outside of class with a participant of your choice. Hand in both a test plan and a usability testing debrief based on your findings. Due at the start of class 4/8/03.
